AB The present invention provides methods and compositions to dedifferentiate a cell. The ability of the methods and compositions of the present invention to promote the dedifferentiation of differentiated cells, including terminally differentiated cells, can be used to promote regeneration of tissues and organs in vivo. The ability of the methods and compositions of the present invention to promote the dedifferentiation of differentiated cells, including terminally differentiated cells, can further be used to produce populations of stem or progenitor cells which can be used to promote regeneration of tissues and/or organs damaged by injury or disease. Accordingly, the present invention provides novel methods for the treatment of a wide range of injuries and diseases that affect many diverse cell types.

AB A method and packaging for vaccinating or medicating an animal by **implanting** a solid dose medicament in an animal. The solid dose medicament, or plurality of such medicaments, are each **color-coded** to identify a particular active ingredient, then packaged in a **pellet magazine** through which the doses are visible, and thereafter the pellets are **implanted**, usually subcutaneously, into the base of the ear or in the neck of an animal. The same system can be used for **colored** ballistic **implants**.
